

# BITCOIN AND ALTCOIN

Bitcoin is the cryptocurrency with the largest market capitalization in the world.

Altcoins (alternatives bitcoin), are any alternative currency to bitcoin.

Several things can be deduced from this concept. Let us define bitcoin as the “digital currency of the world.” Given this first concept, let us compare this currency to a language universally recognized and spoken in the world. If there were only one language, understood and used by everyone, what would be the point of creating other lesser-used and perhaps more complex languages? and to return to altcoins, if bitcoin already exists, what is the point of having all these altcoins?

Many altcoins (called shitcoins) are useless coins that do not and never will have any real intrinsic value, instead many others are born with specific tasks, and it is up to them to find a slice of the market that needs that particular product or protocol.

One has to imagine bitcoin, as a “store of value” or universal currency and altcoins as if they were companies, which have to implement

products based on this technology that are able to emerge and give value in society.

Going back to the comparison with languages, the whole world uses bitcoin on a day-to-day basis, but for certain jobs and activities it will be necessary for people to use a more technical and articulate language, and that is where altcoins come in, which are specific languages for certain protocols.

No one will ever be able to speak all the languages of the world, however, we can all know their basic structure to at least be able to interpret what we are told and read, and in the crypto world it is the same, no one will ever be able to know all the altcoins and all the existing protocols, but anyone can know the basic structure to interpret them and learn how to use them.

Altcoins give you the opportunity to invest in projects, or companies you believe in, leaving aside speculation buying the currency of a particular company or protocol means for all intents and purposes benefiting from that company's growth.

Welcome to the stock market of the future.
